

INTRODUCING

VAB™

patent pending

A NEW ANGLE ON AN OLD PROBLEM

THE NEW VAB IS THE FIRST VARIABLE ANGLED BRACKET OF ITS KIND, MAKING IT POSSIBLE TO INSTALL SNOW RETENTION ON AN INCLINED SURFACE WITHOUT THE NEED TO ADD ADDITIONAL SNOW GUARD PROTECTION ABOVE IT.

Unique design allows the snow retention system to follow the direction of the eave but swivels to attach to the varying angles of the roof panel ribs.

Adjusts to accommodate complex installation scenarios. VAB is available in both left and right configurations

Utilizes AceClamp® non-penetrating components for quick and easy installations

GAIN MORE FLEXIBILITY WITH YOUR INSTALLS
